

# Usability testing

Group 10

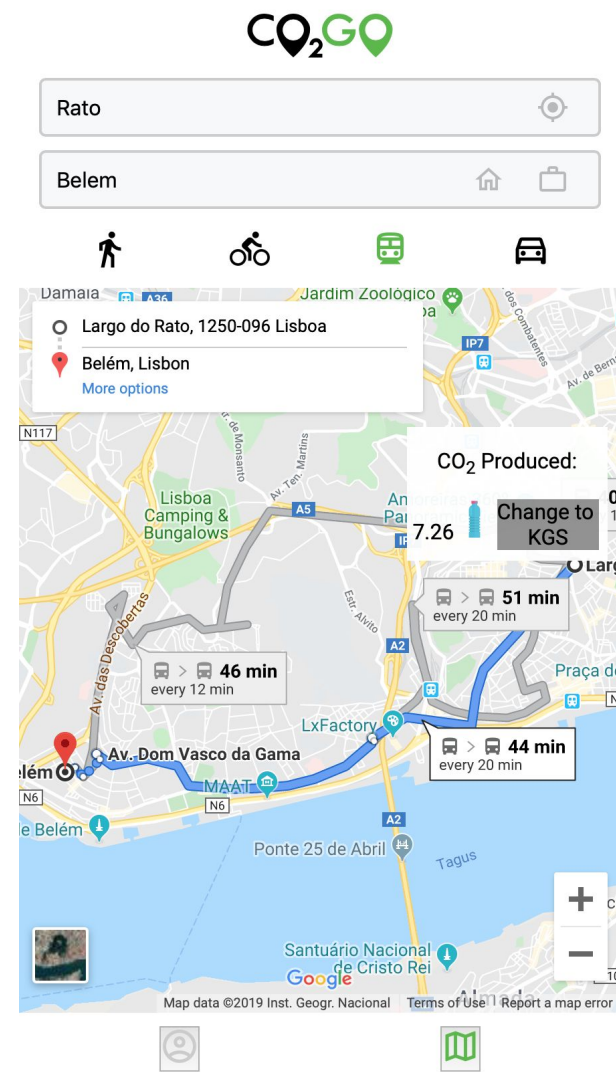

# User research methodology

**The task:** “Find the route from point A to B by public transport and see how much CO<sub>2</sub> is emitted by number of bottles.”

**Efficiency:** Time to complete task (30 seconds) & number of clicks excluding typing (5)

**Effectiveness:** Task completion

**Satisfaction:** Scale 1-5

# Script

- “Test that takes maximum of 5 minutes, just for improving and testing our prototype and not to test you as a user. “
- Description of the task
  - “Find the route from point A to B by public transport and see how much CO<sub>2</sub> is emitted by number of bottles.”

# Result

**Users:** 5

**Efficiency:** Average of 30.6 seconds, 3.5 clicks

**Effectiveness:** task completed by all users

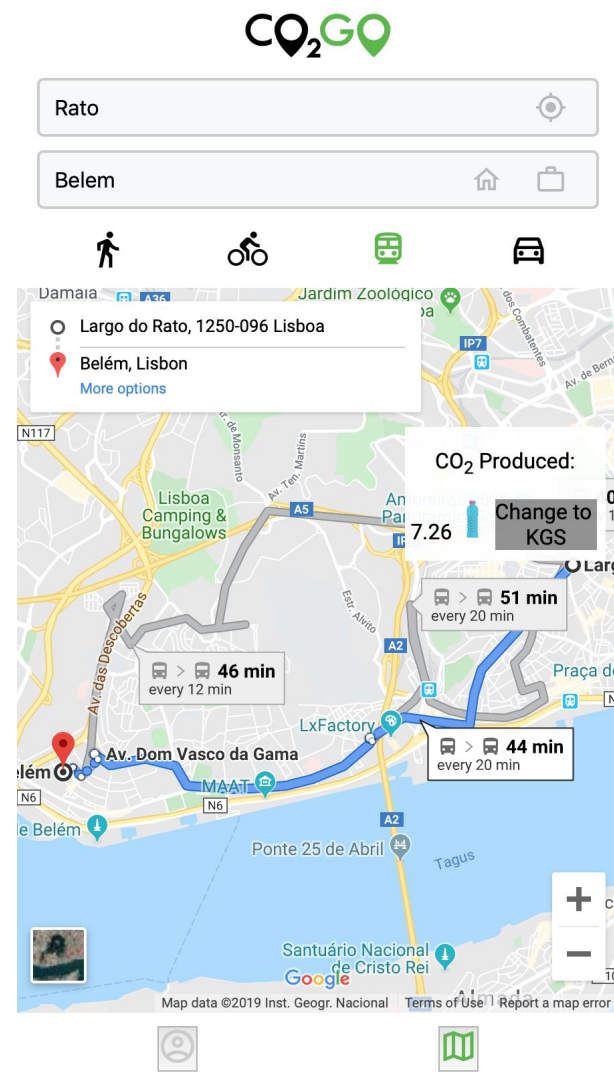

**Satisfaction:** 4.4

# Debriefing

## What went well:

Users all completed the task and did it within our expected time and clicks

# Debriefing

**What could be better:** Minor design improvements, such as making it more visually appealing

## Feedback from the users:

- Regarding Personal Page/Statistics: also display the benchmark: How much did you save by using your chosen means of transport instead of the using worst option.

3	Kim	190.68
4	Chris	88.38
5	Bernard	73.85

# Debriefing

**What could be better:** Minor design improvements, such as making it more visually appealing

## Feedback from the users:

- Move the CO<sub>2</sub>- box under to the left for consistency
- Move the CO<sub>2</sub> levels to the transportation method bar

# Design implication and other improvements

- Move the CO<sub>2</sub> indicator where it is more intuitive - for example to the transportation method bar
- Show comparison to worst method
- Work on the design to make it more visually appealing
